

Meeting 18-02-2019

For this meeting we prepared a few questions for Wolf and these are the important responses:

- copy template and work in there, incase we mess up the template.
- DO NOT PUSH IN MASTER!!
- check 3 sources before asking Wolf. (stackoverflow, teammates, youtube.....)
- everything we do needs to be written down with some argumentation. If we choose to not do something also write it down with some argumentation.
- paired programming is advised.
- make sure everyone understands the proces and the steps that have been taken.

After the meeting we started working on the server and client side. We started working with sockets, but eventually decided to make use of HTTPS servers. Because we are connecting the user with the server and it's important the user information is safe. The HTTPS connection will help providing a safer environment for our users. We did this by splitting up the group into 2 groups, 1 group works on the clientside while the others are working on the serverside.
